</table>
This manual has been prepared to acquaint you with the safety information, operation, and maintenance of your new FISHER® snowplow. Please read this manual carefully and follow all recommendations. Failure to do so may affect your warranty coverage.

Before using your FISHER snowplow, make sure that your vehicle is equipped with all the vehicle manufacturer's and our required options for plowing. This will help ensure profitable and trouble-free operation of your snowplow.

Your FISHER snowplow Insta-Act® hydraulic unit and blade both have a serial number. Record these serial numbers on the Snowplow Owner Data Sheet at the front of this manual to refer to when necessary.

When service is necessary, bring your snowplow to your local FISHER outlet. They know your snowplow best and are interested in your complete satisfaction.

Keep this manual accessible. It is a handy reference in case minor service is required.

The illustrations found in this manual represent typical components. They may not match your exact installation.

Most of the information in this Owner's Manual applies to all Minute Mount® 2 applications. Differences among straight-blade, HC, HD2™, HDX™, HT Series™, EZ-V®, XtremeV™, XV2™, and XLS™ applications are called out in the text or under separate headings, as required.
SAFETY DEFINITIONS

WARNING
Indicates a potentially hazardous situation, that if not avoided, could result in death or serious personal injury.

CAUTION
Indicates a potentially hazardous situation that, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTE: Indicates a situation or action that can lead to damage to your snowplow and vehicle or other property. Other useful information can also be described.

WARNING/CAUTION & INSTRUCTION LABELS

Become familiar with and inform users about the warning/caution and serial number labels on the back of the blade and the instruction label on the headgear.

NOTE: If labels are missing or cannot be read, see your sales outlet.
SAFETY

Instruction Labels

Warning/Caution Label

ATTACH

1. Push Pin Release Handle to pull out Connecting Pins.
2. Drive vehicle slowly to engage Pushplates into Attachment Arms.
7. Attach all electrical connections.

DETACH

1. Place control in Lower/Float to pull blade down.
3. Stand in front of blade. While pushing Headgear toward vehicle with left hand, push Pin Release Handle down to disengage Connecting Pins. Make sure Connecting Pins are fully retracted. If unable to push Headgear from in front of blade, stand in front of Headgear on driver side and push Headlamp Bracket.
4. Detach all electrical connections.

For EZ-V® snowplows this label is on the blade.

Multiple Pinch Points Label

XLS™ Blades Only
(both sides)

Lower blade when vehicle is parked.
Do not exceed GVWR or GAWR including blade and ballast.

Read Owner’s Manual before operating or servicing snowplow.
Transport speed should not exceed 45 mph (72 km/h). Further reduce speed under adverse travel conditions.
Plowing speed should not exceed 10 mph (16 km/h).

See your sales outlet/website for specific vehicle application recommendations.

SAFETY

SAFETY PRECAUTIONS

Improper installation and operation could cause personal injury and/or equipment and property damage. Read and understand labels and the Owner's Manual before installing, operating, or making adjustments.

⚠️ WARNING

Lower the blade when the vehicle is parked. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

⚠️ WARNING

Do not exceed GVWR or GAWR including the blade and ballast. The rating label is found on the driver-side vehicle door cornerpost.

⚠️ WARNING

Remove blade assembly before placing vehicle on hoist.

⚠️ CAUTION

Read Owner's Manual before operating or servicing snowplow.

⚠️ CAUTION

Transport speed should not exceed 45 mph (72 km/h). Further reduce speed under adverse travel conditions.

⚠️ CAUTION

Plowing speed should not exceed 10 mph (16 km/h).

⚠️ CAUTION

See your FISHER® outlet for application recommendations.
HYDRAULIC SAFETY

Always inspect hydraulic components and hoses before using. Replace any damaged or worn parts immediately.

If you suspect a hose leak, DO NOT use your hand to locate it. Use a piece of cardboard or wood.

FUSES

The FISHER® electrical and hydraulic systems contain several automotive-style fuses. If a problem should occur and fuse replacement is necessary, the replacement fuse must be of the same type and amperage rating as the original. Installing a fuse with a higher rating can damage the system and could start a fire. Fuse Replacement, including fuse ratings and locations, is located in the Maintenance section of this Owner's Manual.

PERSONAL SAFETY

- Remove the ignition key and put the vehicle in PARK or in gear to prevent others from starting the vehicle during installation or service.
- Wear only snug-fitting clothing while working on your vehicle or snowplow.
- Do not wear jewelry or a necktie, and secure long hair.
- Wear safety goggles to protect your eyes from battery acid, gasoline, dirt, and dust.
- Avoid touching hot surfaces such as the engine, radiator, hoses, and exhaust pipes.
- Always have a fire extinguisher rated BC handy, for flammable liquids and electrical fires.

WARNING

Hydraulic fluid under pressure can cause skin injection injury. If you are injured by hydraulic fluid, get medical attention immediately.
SAFETY

FIRE AND EXPLOSION

Be careful when using gasoline. Do not use gasoline to clean parts. Store only in approved containers away from sources of heat or flame.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gasoline is highly flammable and gasoline vapor is explosive. Never smoke while working on vehicle. Keep all open flames away from gasoline tank and lines. Wipe up any spilled gasoline immediately.</td>
</tr>
</tbody>
</table>

VENTILATION

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicle exhaust contains lethal fumes. Breathing these fumes, even in low concentrations, can cause death. Never operate a vehicle in an enclosed area without venting exhaust to the outside.</td>
</tr>
</tbody>
</table>

CELL PHONES

A driver's first responsibility is the safe operation of the vehicle. The most important thing you can do to prevent a crash is to avoid distractions and pay attention to the road. Wait until it is safe to operate Mobile Communication Equipment such as cell phones, text messaging devices, pagers, or two-way radios.
SAFETY

BATTERY SAFETY

⚠️ CAUTION

Batteries normally produce explosive gases, which can cause personal injury. Therefore, do not allow flames, sparks, or lit tobacco to come near the battery. When charging or working near a battery, always cover your face and protect your eyes, and also provide ventilation.

- Batteries contain sulfuric acid, which burns skin, eyes, and clothing.
- Disconnect the battery before removing or replacing any electrical components.

NOISE

Airborne noise emission during use is below 70 dB(A) for the snowplow operator.

VIBRATION

Operating snowplow vibration does not exceed 2.5 m/s² to the hand-arm or 0.5 m/s² to the whole body.
Vehicle application recommendations are based on the following:

- The vehicle with the snowplow installed must comply with applicable Federal Motor Vehicle Safety Standards (FMVSS).

- The vehicle with the snowplow installed must comply with the vehicle manufacturer's stated gross vehicle and axle weight ratings (found on the driver-side door cornerpost of the vehicle) and the front and rear weight distribution ratio. In some cases, rear ballast may be required to comply with these requirements. See "Ballast Requirements" later in this section.

- FISHER eMatch selection system is based on available vehicle capacity for snowplow equipment on a representative vehicle equipped with options commonly used for plowing and with 300 lb of front seat occupant weight.

- Weight of front seat occupants can be adjusted above 300 lb, but vehicle with snowplow must not exceed vehicle GVWR or GAWR.

- In some cases there may be additional limitations and requirements.

- Installation, modification, and addition of accessories must comply with published FISHER recommendations and instructions. Available capacity decreases as the vehicle is loaded with cargo or other truck equipment, or snowplow accessories are installed.

- If there is uncertainty as to whether available capacity exists, the actual vehicle as configured must be weighed.
VEHICLE APPLICATION INFORMATION

BALLAST REQUIREMENTS

Ballast (additional weight) is an important part of qualifying vehicles for snowplow eligibility. Rear ballast must be used when necessary to remain in compliance with axle ratings and ratios as specified by the vehicle manufacturer.

If ballast is required, it is important that it be secured properly behind the rear axle. A ballast retainer kit is available from your FISHER® outlet (PN 62849).

NOTE: The ballast retainer kit is for snowplow vehicles requiring ballast. See your FISHER outlet for the correct amount of ballast required. Include the weight of the retainer as part of the ballast requirement. Sand bags are recommended for use as ballast.

NOTE: Ballast recommended and its weight calculations assume the entire width of the bed is filled as close to tailgate as possible.
Minute Mount® 2 SYSTEM

The Minute Mount 2 system continues to set the industry standard for detachable snowplow design. The quickest and easiest mounting system available, the Minute Mount 2 system is twice the mount because it takes half the time. The Minute Mount 2 system should be installed according to the instructions supplied. FISHER® outlets are trained to perform this and other services for your snowplow.

Most of the snowplow mount can now be removed easily from the truck when it's not being used for plowing. By removing the headgear, lift arm, and headlamps every time you remove the snowplow, you eliminate over 100 lb of weight on the front suspension and tires, resulting in less wear all year long. This also means improved appearance of your four-wheel drive or sport/utility vehicle.
BLADES

The FISHER® difference—the integral trip-edge design—is incorporated into all Minute Mount® 2 system blades. When the blade strikes an obstacle, only the edge trips, not the entire blade. When the obstacle is cleared, the edge returns to its normal plowing position. The plowed snow stays in front of the vehicle at all times because the blade remains upright.

Moldboards are constructed of STORM GUARD™ powder-coated heavy-gauge steel or stainless steel (depending on blade model) with a formed top edge. The blades are reinforced with a steel framework to increase rigidity and strength, and are designed using the latest advances in computer design techniques.

The blade is curved to pick up snow and cast it aside smoothly—rolling snow instead of pushing it. This action allows you to move more snow faster, using less power, saving fuel, and reducing wear and tear on the vehicle and snowplow.

The base angle is designed with a unique trip edge. Heavy compression springs on the back side of the blade hold each edge in the plowing position. The springs are a safety device that allow the trip edge to ride over obstacles without damaging the blade or vehicle or injuring the driver. The springs need no adjustments and offer protection in all blade configurations and angles.
GETTING TO KNOW YOUR SNOWPLOW

HC Series

Designed for trucks in the 17,000–27,500 lb GVW range, these 9' and 10' snowplows are built for municipalities and commercial entities. Both blades include a trip-edge design, cutting edge with two 6" curb guards standard, 1-3/4" x 10" lift ram, and 2" x 12-1/2" angle rams. SnoFoil® assembly, rubber deflector, shoe kit, and blade stops are sold separately.

HD2™

Designed for today's snow plowing professional, the HD2 snowplow is available in 7'6", 8', 8'6", and 9' widths and is constructed of heavy-duty high-strength steel. The HD2 blade is built for the toughest commercial plowing applications and is designed for 3/4- and 1-ton 4 x 4 trucks, as well as today's "super-duty" vehicles. Maximize your snowplow's efficiency and reliability with the full line of HD2 accessories,* including blade wings, back drag edges, rubber or steel deflectors, SnoFoil assembly, curb guards, shoe kit, heavy-duty lift ram, blade guides, and a full line of cutting edges (rubber, poly, 5/8" steel, and carbide).

HDX™

The ultimate in straight blade performance and reliability, the stainless steel HDX snowplow gives you a whole new way to attack winter. Built for the business of plowing, this rugged snowplow will withstand the rigors of commercial applications. The HDX blade is designed for 3/4- and 1-ton 4 x 4 trucks and is a fully featured stainless steel straight blade. An articulating A-frame helps your blade follow the contours of the road and provides a cleaner scrape while the adjustable attack angle allows you to customize your snowplow's performance—adjust the attack angle to 55°, 65°, or 75°, depending on your application. Maximize your HDX snowplow's efficiency and reliability with a full line of plow accessories.*

* HD2™ snowplow accessories are compatible with HDX snowplow models. See the HD2 snowplow description for accessories list.
GETTING TO KNOW YOUR SNOWPLOW

**HS Compact Plow**

The 23½" tall, reliable, HS compact plow's 16-gauge, powder coated steel moldboard comes in 6' 8" and 7' 2" widths for rugged snow plowing performance. It provides the brawn of a big plow, yet is light enough for a mid-size truck or SUV. A standard high-carbon steel cutting edge provides increased wear resistance. A curb guard kit, steel or poly cutting edges, rubber deflector, and adjustable shoe kit are sold separately.

**HT Series™**

As truck manufacturers reduce vehicle weight to increase fuel efficiency, plowers struggle to find a rugged, hard-working snowplow that matches their half-ton truck specifications. The 7'6" HT Series snowplow is the answer: a full-sized, full-featured snowplow designed specifically for today’s half-ton four-wheel drive trucks. Carbon steel cutting edges (3/8" & 1/2"), 1" poly cutting edge, rubber deflector, poly SnoFoil® assembly, curb guards, and cast iron shoes are sold separately.

**SD Series**

Available in 6'9" and 7'6" widths, the FISHER® SD series snowplows are designed for compact and light 1/2-ton four-wheel drive trucks, as well as some sport/utility vehicles. These snowplows are ideal for homeowners and noncommercial plowing situations.

**XLS™**

The next generation of the XLS expandable snowplow delivers a whole new level of versatility, efficiency, and performance. With more options than before, the XLS snowplow now comes in two blade sizes and is offered in both stainless steel and STORM GUARD™ powder-coated steel. Its wide scoop position carries more snow and can fully angle to maximize handling and capacity when cornering or plowing around obstacles. For unmatched windrowing productivity, the leading wing angles forward to direct more snow into the moldboard to minimize spilloff and effectively use the entire blade width.

* Snowplows with serial numbers beginning with 180210 and higher.
GETTING TO KNOW YOUR SNOWPLOW

**EZ-V**
Built from high-strength, low-alloy steel, the 7'6" EZ-V snowplow is designed to deliver superior strength and allow the performance and efficiency of a V-plow with the agility of a half-ton truck application. Featuring standard InstaLock double-acting cylinders, this V-plow can provide precise control of the blade wings that operate independently or together for straight-blade operation. The EZ-V V-plow is available in stainless steel or STORM GUARD™ powder-coated steel. Accessories include: a shoe kit, rubber deflector, curb guards, 1/2" cutting edge kit, back drag edge kit, poly cutting edge kit.

**XtremeV™**
The XtremeV snowplow features a tapered-wing design to provide a multi-position snowplow with superior torsional strength. Available in 7'6", 8'6", and 9'6" widths, the moldboards come in stainless or STORM GUARD powder-coated steel. Cutting edge is standard. Accessories include a rubber deflector, blade wing extensions, and a back drag edge.

**XV2™**
With its deep curl, tapered-wing design, the XV2 blade takes the popular XtremeV wing design to another level. Available in 7'6", 8'6", 9'6", and 10'6" widths, the XV2 snowplow combines extreme carrying capacity with the versatility of a multi-position V-plow. Featuring InstaLock double acting cylinders, the XV2 blade provides absolute hydraulic control of the moldboard—move the wings independently or together for straight-blade operation. XV2 blades are available in stainless steel or STORM GUARD powder-coated steel.
A-FRAME/T-FRAME

Straight Blade A-Frames

The A-frame is attached to the blade assembly with a center pivot pin (HD2™, HDX™, and HT Series™ A-frames use a center bolt). The pivot pin allows the blade assembly to angle left or right, providing excellent snow displacement. The heavy 1" pivot pin is shear-proof under normal operation, assuring a solid connection.

XLS™ A-Frame

The A-frame is attached to the blade assembly with a centered pivot bolt. The pivot bolt allows the blade assembly to angle left or right 25°, providing excellent snow displacement. The heavy 1" pivot bolt is shear-proof under normal operation, assuring a solid connection.

HC Series, XtremeV™, EZ-V® & XV2™

T-Frame/Push Assembly

The T-frame is designed to provide optimum strength-to-weight ratio and is adjustable to accommodate variations in vehicle height. The leveling feature ensures that blade edges can be kept parallel to the road surface when plowing. Diagonal bracing supports the upper end of the pivot bolt and keeps the blade vertical.

HEADGEAR

The headgear assembly is composed of the headgear, linkage mechanism, lift arm, and jack. The headgear is connected to the pushplates, which are mounted directly to the vehicle frame. The headgear also provides the mounting framework for the FISHER® Insta-Act® hydraulic unit and the lift arm. The lift ram raises and lowers the blade by moving the lift arm and lift chain. The jack, when lowered, supports the snowplow during and after its removal from the vehicle.

MOUNT KITS

Fisher Engineering has designed a mount kit for most vehicles. Due to the differences among vehicle models, the kits are not interchangeable.

The mount kit fastens to the vehicle frame. It is engineered to provide the primary connecting points between the snowplow assembly and the vehicle. The weight of the Minute Mount® 2 system is distributed to the frame of your vehicle by the pushplates.
GETTING TO KNOW YOUR SNOWPLOW

SNOWPLOW HEADLAMPS

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your vehicle must be equipped with snowplow headlamps and directional lights.</td>
</tr>
</tbody>
</table>

When the electrical plugs are connected, the vehicle headlamps will automatically switch to the snowplow headlamps when they are turned ON. When the electrical plugs are disconnected, the headlamps will automatically switch to vehicle headlamps when they are turned ON.

Replacement parts are available through your local FISHER® outlet.

INTENSIFIRE™ Snowplow Headlamps

The INTENSIFIRE snowplow headlamps consist of a set of dual-beam halogen headlamps plus combination park and turn signals. A pre-wired harness with a plug-in module requires no headlamp wire splicing. The headlamps conform to Federal Motor Vehicle Safety Standards (FMVSS).

INTENSIFIRE™ LED Snowplow Headlamps with EdgeView™ Technology

The INTENSIFIRE LED snowplow headlamps with EdgeView technology are rectangular solid-optic LED headlamps with focused low and high beams, combination Daytime Running Lamps (DRL) and park/turn lights, and blade-edge illumination. A pre-wired harness and headlamp control module require no headlamp wire splicing. EdgeView technology offers three choices for blade-edge illumination. The headlamps conform to Federal Motor Vehicle Safety Standards (FMVSS).
GETTING TO KNOW YOUR SNOWPLOW

Insta-Act® HYDRAULIC UNITS

The Insta-Act hydraulic unit delivers fast, uniform speed for lifting and angling.

**Straight blades** are raised in approximately 3 seconds and angled side to side in approximately 6 seconds.

The **HT Series™** hydraulic unit has built-in blade scrape lock circuitry to resist the tendency of a snowplow to "float up" while plowing deep snow or stacking snow into piles. This feature is activated when the blade is in FLOAT, and is factory set. See your sales outlet for adjustment. The **HT Series blade** and **HS compact plow blade** are raised in approximately 4 seconds and angled side to side in approximately 3 seconds.
The Insta-Act® hydraulic unit’s angling gives you full control of the snowplow from inside the cab. Hydraulic rams hold the blade at a desired angle. In XtremeV™, XV2™, and XLS™ blades, the rams operate each wing independently or together as a single unit. The XtremeV and XV2 blades are raised in approximately 3 seconds and angled side to side in approximately 2 seconds.

The XLS blade is raised in approximately 3 seconds and angled side to side in approximately 2 seconds. Each wing extends and retracts individually in approximately 2 seconds. Both wings extend together in 4 seconds and retract together in 3 seconds.

The EZ-V® blade's double-acting hydraulic rams hold the wings at the desired angles. The wings are raised in approximately 2 seconds and angled side to side in approximately 2 seconds.
GEETING TO KNOW YOUR SNOWPLOW

### System Capacity

#### EZ-V® Snowplows and HS Compact Plows
- Insta-Act® Unit Reservoir ............... 1-3/4 quarts
- Insta-Act System Total................... 2-1/8 quarts

#### All Other Blades
- Insta-Act Unit Reservoir............... 1-3/4 quarts
- Insta-Act System Total...... 2-3/8 to 2-3/4 quarts

### Pump Motor Specifications

#### Straight Blades
- 12V DC with +/- Connection
- 2200–2300 psi Pump Relief Valve
- 4000 psi Angling Relief Valve
- 4.5" dia 1.5 kW Motor
- 0.000477 gal/rev Pump
- Hydraulic Hose 1/4 SAE 100R1 and 3/8 SAE 100R17

#### HT Series™ Blades
- 12V DC with +/- Connection
- 1600–1700 psi Pump Relief Valve
- 4000 psi Angling Relief Valve
- 3" dia 0.8 kW Motor
- 0.000477 gal/rev Pump
- Hydraulic Hose SAE 100R1

GETTING TO KNOW YOUR SNOWPLOW

CAB CONTROLS

WARNING
To prevent accidental movement of the blade, always turn the control OFF whenever the snowplow is not in use. The power indicator light will turn OFF.

FISHER® snowplows come equipped with either a Fish-Stik® hand-held control or a joystick-style control.

The snowplow controls allow you to go from a V-plow or extra wide snowplow, to a scoop, to a standard straight-blade snowplow, all at the touch of a button or with a single lever movement.

Each control has its own ON/OFF switch with an indicator light to show when the control is powered up. Your vehicle ignition (key) switch controls a fused circuit that powers your cab control directly from the battery.

The ON/OFF switch on the cab control allows you to turn OFF the control and prevent blade movement even when the ignition switch is ON.

The control ON/OFF switch serves as an emergency stop if required.

All controls are protected by a replaceable fuse located in the under-hood snowplow electrical system. See "Fuse Replacement" in the Maintenance section of this Owner's Manual.

ACCESSORIES AND OPTIONS

REPLACEABLE CUTTING EDGES

Carbon Steel
Cutting edges made of high-carbon steel bolt to the base angle for maximum blade life. Depending on the blade series, cutting edges are 3/8", 1/2", or 5/8" thick, and 6" or 8" wide.

Carbide Steel
Carbide steel edges provide superior durability and performance and longer wear compared to traditional steel cutting edges.

UHMW Polymer
Durable 1"-thick cutting edges made of lightweight polymer absorb much of the shock and vibration when the blade encounters rough surfaces.

Rubber
6" cutting edges conform to the surface being plowed rather than scraping, making them perfect for concrete, parking garages, brick, pavers, cobblestone, or any other sensitive or uneven surface. Made of a tough, high-wear compound that provides a clean and quiet "squeegee" action.

BACK DRAG EDGE KITS
Achieve cleaner results and increased efficiency with a genuine back drag edge. Made from 1/4" abrasion-resistant steel and custom fit to your blade, this edge provides a clean scrape while back dragging.

SnoFoil® ASSEMBLY
This rigid, curved extension bolts to the top of the snowplow blade and improves visibility and plowing efficiency by deflecting light snow away from the windshield.

STEEL DEFLECTOR
Keeps fluffy snow from flowing over the top of the blade. Easily installed and attractively priced.
ACCESSORIES AND OPTIONS

RUBBER DEFLECTOR

This flexible deflector keeps fluffy snow from flowing over the top of the blade. Easily installed and attractively priced.

WING KITS

Accessory wings increase the carrying capacity of your snowplow. Available for the HD2™ and HDX™ straight blades and the XtremeV™ (except 7'6”) and XV2™ (except 10'6”) V-plows.

ANTI-WEAR SHOES

Offer maximum protection against blade and/or base angle wear on rocky and/or abrasive surfaces (hard pack, gravel).

CURB GUARD KIT

Designed to fit on the ends of the trip edge, these guards protect against scraping the bottom edge of the blade against curbs and sidewalks.

FISHER® EZ Flow HYDRAULIC FLUID

Improve the performance of your hydraulic systems, especially in extremely cold weather, with FISHER EZ Flow hydraulic fluid. Special anti-wear and anti-foaming additives keep your system running longer and smoother.

DIELECTRIC GREASE

Specially formulated to protect all your electrical connections in severe winter conditions. Fisher Engineering recommends all snowplow owners use dielectric grease on a regular basis.
TOUCH-UP PAINT

FISHER® touch-up paint is available to keep your snowplow protected from rust.

Minute Mount® 2 SYSTEM SKID PLATES

These off-season inserts for the Minute Mount 2 system pushplates offer protection by filling and covering the receiver portion of the pushplates. They also add to the vehicle's off-season appearance.

ProTube™ BUMPER/GRILLE GUARD

Available in black powder-coated finish, this attractive, off-season grille guard mounts to most existing Minute Mount 2 system pushplates. The mounting brackets double as skid plates. Tabs are provided for mounting auxiliary fog lights (not included).

PLOW PARKA

This long lasting plow cover is constructed of heavy duty nylon with a gathered elastic band sewn into the bottom edge for a tight, weather-resistant fit. It takes just seconds to install and provides protection for your snowplow's electrical and hydraulic systems.

EMERGENCY PARTS TOOL BOX KIT

This tool box contains necessary service parts to make on-the-spot repairs to your snowplow. There's also a quart of FISHER EZ Flow hydraulic fluid and a knit cap to keep your ears warm while you're out in the cold.
ATTACHING SNOWPLOW TO VEHICLE

ATTACHING SNOWPLOW

⚠️ WARNING
Keep 8’ clear of the blade when it is being raised, lowered, or angled. Do not stand between vehicle and blade or directly in front of the blade. If the blade hits or drops on you, you could be seriously injured.

⚠️ WARNING
Inspect snowplow components and fasteners for wear or damage whenever attaching or detaching the snowplow. Worn or damaged components could allow the snowplow to drop unexpectedly.

⚠️ WARNING
Keep fingers away from snowplow and truck attachment points.

NOTE: The blade must be in the straight position when attaching or detaching the snowplow.

NOTE: Use dielectric grease to prevent corrosion on all connections.

NOTE: Use lubricant on connecting pins to ensure ease of attach/detach.

Attaching Steps:

1. Pull pin release handle and push down to pull out connecting pins.
   
   **HS Compact Plow:** Verify that both connecting pins are locked into the receiver notch.

2. Drive vehicle slowly forward.

   **HS Compact Plow:** Engage rear receiver pins completely into the headgear slots. Apply vehicle parking brake.
**ATTACHING SNOWPLOW TO VEHICLE**

**Other Blades:** Engage pushplates into attachment arms.

**HT Series™ Blades only:** Attach all electrical connectors. With the ignition in the "ON" position, turn ON the control and activate the FLOAT mode.

3. **HS Compact Plow:** Rotate and unlock connecting pins on receivers. Plug in the electrical harness. Turn snowplow control in vehicle ON and activate the FLOAT mode. Stand in front of blade.

**Other Blades:** Stand in front of blade. Fully raise pin release handle to release connecting pins.

4. **HS Compact Plow:** Push top of headgear toward vehicle to allow connecting pins to fully engage the connecting pin holes. Verify that both connecting pins are engaged through all holes on the headgear and receivers. See page 38 for illustrations.

**Other Blades:** Push headgear toward vehicle to allow connecting pins to fully engage pushplates. If unable to push headgear from in front of blade, stand in front of headgear on driver's side and push headlamp bracket.

**HT Series Blades:** Using headgear push bar, push headgear toward vehicle to allow connecting pins to fully engage pushplates. See page 39 for illustrations.
5. **HS Compact Plow:** While holding stand lock pin out, use stand handle to raise the stand. Release the stand lock pin into locking hole and verify that stand is secure. Stop here; attachment is complete.

**HT Series™ Blades:** Pull and hold jack lock out. Use jack handle to raise jack fully and release jack lock. Repeat on opposite side. Stop here; attachment is complete.

**Other Blades:** Pull out jack lock. Push pin release handle into stop.

6. While holding jack lock out, use jack handle to raise jack fully. Release jack lock.

7. Attach all electrical connectors.

OPERATING YOUR SNOWPLOW

Fish-Stik® HAND-HELD CONTROL

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. Press the ON/OFF button on the control. The power indicator light glows red, indicating the control is ON. The power indicator light glows red whenever the control and the vehicle ignition switch are both ON and the electrical connections to the snowplow are completed.

   The ON/OFF button operates as an emergency stop if required.

**Function Time-Outs**

To limit the amount of electrical energy required from the vehicle, all control functions, except LOWER/FLOAT, time out (stop) automatically after a period of time. The blade will coast to a stop.

**NOTE:** If a control function times out before desired blade movement is complete, release the button and press it again.

For snowplow-specific function timeouts, see the Timeout Table in the Appendix.
OPERATING YOUR SNOWPLOW

Automatic Shutdown

The control will automatically turn OFF after being idle for 20 minutes. To reactivate the control after a shutdown, press the ON/OFF button.

Optional Control Features

The control ships from the factory with the Smooth Stop feature enabled and the one-touch FLOAT feature disabled. To change these default settings, see "Smooth Stop" and "One-Touch FLOAT" later in this section of the Owner's Manual.

Control Functions

RAISE, LOWER, FLOAT, Angle

The four diamond-shaped buttons in the center of the control face, when pressed, will result in the blade movements described in the table. For the timeouts for each function by snowplow model, see the Appendix.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAISE</td>
<td>Press this button to raise the blade and cancel FLOAT mode.</td>
</tr>
<tr>
<td>LOWER</td>
<td>Press this button to lower the blade. Release the button to stop the blade at desired height.</td>
</tr>
<tr>
<td>FLOAT†</td>
<td>Press the LOWER button and hold 3/4 second to activate this mode. The FLOAT light in the upper right corner of the control face will illuminate. The blade will lower to the ground surface and follow the contour of the surface as it dips or raises. Function does not time out; however, control will shut down after 20 minutes of nonuse. Press the RAISE button momentarily to cancel FLOAT. Angling left or right will not interrupt (pause) the FLOAT function.</td>
</tr>
</tbody>
</table>

† FLOAT mode activates immediately when one-touch FLOAT feature is enabled. See "One-Touch FLOAT" in this section for more information.
OPERATING YOUR SNOWPLOW

Function | Description of Operation
---|---
**L** (Angle Left) | **Straight blades:** Press the L button to angle the blade to the left.

**All others:** With wings in a straight line, press the L button to move both wings to the angle left position. The left wing retracts while the right wing extends (XtremeV™, XV2™, EZ-V®).

**R** (Angle Right) | **Straight blades:** Press the R button to angle the blade to the right.

**All others:** With wings in a straight line, press the R button to move both wings to the angle right position. The right wing retracts while the left wing extends (XtremeV™, XV2™, EZ-V®).

NOTE: If a control function times out before desired blade movement is complete, release the button and press it again.

---

**SCOOP/RETRACT Blade and WING Positions**

**XtremeV, XV2, EZ-V®, and XLS Blades**

The two round buttons located to the left and right of the RAISE button move both wings at the same time into the blade positions described in the following table. The two round buttons located to the left and right of the LOWER button move either wing independently of the other as described in the following table.
# OPERATING YOUR SNOWPLOW

## Function Description of Operation

<table>
<thead>

<th>Function</th>
<th>Description of Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCOOP</td>
<td>Press this button to extend both wings forward into the scoop position.</td>
</tr>
<tr>
<td>RETRACT</td>
<td>Press this button to draw both wings into the fully retracted/vee position.</td>
</tr>
</tbody>
</table>

### L WING
Press this button on the left side of the control to move the left wing. The first time the button is pressed after the control is turned ON or another function is used, the wing will extend. Repeated use of the same button, without using another function, results in movement in the opposite direction from the previous movement.

### R WING
Press this button on the right side of the control to move the right wing. The first time the button is pressed after the control is turned ON or another function is used, the wing will extend. Repeated use of the same button, without using another function, results in movement in the opposite direction from the previous movement.

---

## SECURITY GUARD™ System (1, 2, 3, 4)

The four round buttons located to the left and right of the LOWER and RAISE buttons will also operate the SECURITY GUARD system (if equipped). See "SECURITY GUARD System" in this section for more information.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Operation</th>
</tr>

</tr>
<tr>
<td>R WING</td>
<td>Press this button on the right side of the control to move the right wing. The first time the button is pressed after the control is turned ON or another function is used, the wing will extend. Repeated use of the same button, without using another function, results in movement in the opposite direction from the previous movement.</td>
</tr>
</tbody>
</table>
JOYSTICK CONTROL

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. Move the ON/OFF switch on the side of the control to the "ON" position. The power indicator light glows red, indicating the control is ON. The indicator light glows red whenever the control and the vehicle ignition switch are both ON and the electrical connections to the snowplow are completed.

The ON/OFF switch operates as an emergency stop if required.

⚠️ WARNING
To prevent accidental movement of the blade, always move the ON/OFF switch to OFF whenever the snowplow is not in use. The power indicator light will turn OFF.

OPERATING YOUR SNOWPLOW

- Power Indicator Light (red)
- FLOAT Light (green)
- ON/OFF Switch (emergency stop)
OPERATING YOUR SNOWPLOW

Function Time-Outs

To limit the amount of electrical energy required from the vehicle, all control functions, except LOWER/FLOAT, time out (stop) automatically after a period of time. The blade will coast to a stop.

NOTE: If a control function times out before desired blade movement is complete, release the lever to the center position, then move it back into the desired function.

For snowplow-specific function timeouts, see the Timeout Table in the Appendix.

Optional Control Features

The control ships from the factory with the Smooth Stop feature enabled and the one-touch FLOAT feature disabled. To change these default settings, see "Smooth Stop" and "One-Touch FLOAT" later in this section of the Owner's Manual.

Control Lever Movement

From the center position, the control lever can be moved in one of eight directions to control various movements of the snowplow blade. To change from one movement of the blade to another, the control lever must be moved back to the center position before selecting the desired function. Whenever the lever is released, it should spring back into the center position to stop any blade movement.

Automatic Shutdown

The control will automatically turn OFF after being idle for 20 minutes. To reactivate the control after a shutdown, move the ON/OFF switch to OFF, then back to ON.
OPERATING YOUR SNOWPLOW

Control Functions

RAISE, LOWER, FLOAT, Angle

Moving the control lever straight up and down or from side to side on the control body will result in the blade movements described in the following tables.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAISE</td>
<td>Move the control lever toward the top of the control body to raise the blade and cancel the FLOAT mode.</td>
</tr>
<tr>
<td>LOWER</td>
<td>Move the control lever toward the bottom of the control body to lower the blade. Release the lever to stop the blade at the desired height.</td>
</tr>
<tr>
<td>FLOAT†</td>
<td>Move the control lever to the LOWER position and hold 3/4 second to activate this mode. The FLOAT light in the upper right corner of the control face will illuminate. The blade will lower to the ground surface and follow the contour of the surface as it dips or raises. Function does not time out; however, control will shut down after 20 minutes of nonuse. Move lever to the RAISE position momentarily to cancel FLOAT. Angling left or right will not interrupt (pause) the FLOAT function.</td>
</tr>
</tbody>
</table>

† FLOAT mode activates immediately when one-touch FLOAT feature is enabled. See "One-Touch FLOAT" in this section for more information.
## Function Description of Operation

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Operation</th>
</tr>
</thead>
</table>
| **L** (Angle Left) | **Straight blades:** Move the control lever straight to the left to angle the blade left.  
**All others:** With wings in a straight line, move the control lever straight to the left to move both wings to the angle left position. The left wing retracts while the right wing extends (XtremeV™, XV2™, EZ-V®). |
| **R** (Angle Right) | **Straight blades:** Move the control lever straight to the right to angle the blade right.  
**All others:** With wings in a straight line, move the control lever straight to the right to move both wings to the angle right position. The right wing retracts while the left wing extends (XtremeV™, XV2™, EZ-V®). |

### SCOOP/RETRACT Blade and WING Positions

**XtremeV, XV2, EZ-V, and XLS™ Blades**

Moving the control lever from the center position toward the word SCOOP or RETRACT on the face of the control body will cause both wings to move at the same time into the following blade positions.

Moving the control lever from the center position toward the words WING IN/OUT, on either side of the face of the control body will cause either wing to move independently of the other as described in the following table.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description of Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCOOP</td>
<td>Move the control lever toward the word SCOOP on the control face to extend both wings forward into the scoop position.</td>
</tr>
<tr>
<td>RETRACT</td>
<td>Move the control lever toward the word RETRACT on the control face to draw both wings into the fully retracted/vee position.</td>
</tr>
</tbody>
</table>

FLEET FLEX Electrical System

Your Minute Mount® 2 system snowplow comes standard with user-controlled programmable features. These include:

- SECURITY GUARD™ anti-theft system
- Smooth stop/soft stop
- One-touch FLOAT

This section provides more information about each feature, as well as instructions on how to enable or disable them. These features are offered to give you the ability to secure your snowplow and customize your plowing experience.
OPERATING YOUR SNOWPLOW

SECURITY GUARD™ System

Activation & Establishing a 4-Digit Security Code

NOTE: The snowplow must be attached to the vehicle, and all the electrical connections must be connected prior to activating the security code function.

The SECURITY GUARD feature was developed as an electrical anti-theft system. It provides a deterrent from theft and/or non-permitted use by allowing you to electronically lock the snowplow's hydraulic functions.

All multiplex snowplow controls come equipped with the SECURITY GUARD system. To use this function, you must complete the activation process.

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position. (It is not necessary to start the vehicle.)

2. Verify that the control power indicator is OFF. If the power indicator light is red, the control is ON. Move the ON/OFF switch to "OFF" or push the ON/OFF button to turn the control OFF.

3. To activate the SECURITY GUARD mode, move the control lever to the #1 position or press the #1 button four consecutive times, then move the lever to the #4 position or press the #4 button four times (sequence: 1, 1, 1, 1, 4, 4, 4, 4). The green FLOAT light will flash quickly and the red power indicator light will turn ON, indicating that the system is ready to accept your 4-digit security code.

4. Enter your 4-digit security code by moving the control lever to (or pressing the button for) any four of the eight positions: UP, DOWN, LEFT, RIGHT, 1, 2, 3, or 4.
5. After you have entered your 4-digit security code, the FLOAT light will stop flashing and the power indicator light will turn OFF. This indicates that your 4-digit security code is entered and stored in the SECURITY GUARD™ system.

NOTE: If the control is turned ON prior to completing the programming procedure, your 4-digit security code will be cancelled.

Once a 4-digit security code is established, the SECURITY GUARD system will recognize any control that has been programmed with the same 4-digit security code. If a control not programmed with the correct 4-digit code is connected to the system, the established security code will have to be entered manually before the snowplow can be activated (see "Manual Unlock Procedure").

Manual Unlock Procedure

If the SECURITY GUARD system is activated and you are using a control programmed with a different 4-digit code than the one established for that snowplow, you will be required to manually enter the correct 4-digit security code to unlock the snowplow.

1. Turn the vehicle ignition to the "ON" or "ACCESSORY" position.

2. Move the ON/OFF switch to the "ON" position or push the ON/OFF button to switch the control ON. The power indicator light will flash rapidly, indicating that the snowplow is locked.

3. Enter the established 4-digit security code.

4. After the correct security has been entered, the power indicator light will change from rapid flashing to steady ON, indicating that the snowplow has been successfully unlocked.
NOTE: If the plow/vehicle electrical connection is lost or disconnected, the SECURITY GUARD™ system will reset, requiring any control that is not programmed with the established 4-digit security code to manually re-enter the security code to activate the snowplow.

Clearing an Established 4-Digit Security Code

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position.

2. If the snowplow is locked (the control power indicator light will be flashing rapidly), unlock the snowplow by following the Manual Unlock Procedure.

3. Move the ON/OFF switch to the "OFF" position or push the ON/OFF button to switch the control OFF. Verify that the power indicator light is OFF.

4. With the control OFF, move the control lever to the #2 position or press the #2 button four consecutive times, then move the lever to the #3 position or push the #3 button four consecutive times. This sequence (2, 2, 2, 2, 3, 3, 3, 3) will clear the 4-digit security code from the SECURITY GUARD system.

The FLOAT light will flash to indicate that the 4-digit security code was cleared.

NOTE: To enter a new 4-digit security code see "Activation & Establishing a 4-Digit Security Code."

</tr>
</tbody>
</table>

Additional Notes

• The SECURITY GUARD™ system requires any control other than the one with the assigned 4-digit security code to enter the security code before the snowplow can be activated. Once the security code is established, the system recognizes when a control programmed with the same security code is attached, and does not require a manual unlock to activate the snowplow. The system will recognize the control as "safe" and will automatically unlock.

• The SECURITY GUARD system is only fully functional with joystick controls PN 49700 & 49900 and hand-held controls PN 29800 & 49800.

• In the event that a snowplow is locked and cannot be manually unlocked or reset, contact your authorized dealer.

• **REMINDER:** Record your security code for future reference.
Smooth Stop/Soft Stop

The smooth stop, or soft stop, feature allows the blade to coast to a stop when the button/lever is released. The result is smoother operation, reduction in shock to the hydraulic system, and an increase in hose and valve life.

While there are advantages to having this feature, there are also advantages to temporarily disabling it. For example, disabling smooth stop allows for more precise movements of the blade while operating close to buildings and other obstacles.

All controls come standard with this feature ENABLED. To enable/disable this feature, perform the following steps. Performing the sequence multiple times will toggle the feature between enabled and disabled.

Enable/Disable Procedure

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position. (It is not necessary to start the vehicle.)

2. Verify that the control power indicator is OFF. If the power indicator light is red, the control is ON. Move the ON/OFF switch to "OFF" or push the ON/OFF button to turn the control OFF.

3. Move and hold the control lever to the "R" position or press and hold the R button while turning the control ON. The power indicator light will turn ON and the FLOAT light will flash, indicating the status of the feature.

Light Flash Indicators

<table>
<thead>
<tr>
<th>Light</th>

<tbody>
<tr>
<td>POWER – Red</td>
<td>Solid ON = Control is ON</td>
</tr>
<tr>
<td>FLOAT – Green</td>
<td>1 Flash = Smooth stop enabled</td>
</tr>
<tr>
<td></td>
<td>2 Flashes = Smooth stop disabled</td>
</tr>
</tbody>
</table>
**One-Touch FLOAT**

One-touch FLOAT immediately activates the FLOAT mode and releases the blade to the ground, without having to hold the button or lever in LOWER. This can improve transition time when backing up to plow forward again, eliminating the time spent holding the control and waiting for the blade to fully drop.

All controls come standard with this feature DISABLED. To enable/disable this feature, perform the following steps. Performing the sequence multiple times will toggle the feature between enabled and disabled.

**Enable/Disable Procedure**

1. Turn the vehicle ignition switch to the "ON" or "ACCESSORY" position. (It is not necessary to start the vehicle.)
2. Verify that the control power indicator is OFF. If the power indicator light is red, the control is ON. Move the ON/OFF switch to "OFF" or push the ON/OFF button to turn the control OFF.
3. Move and hold the control lever to the "LOWER" position or press and hold the LOWER button while turning the control ON. The power indicator light will turn ON and the FLOAT light will flash, indicating the status of the feature.

V-PLOW BLADE POSITIONS

NOTE: For best road clearance during transport, place the blade halfway between the straight and retracted (vee) positions. The scoop position is NOT RECOMMENDED during transport.

The V-plow can be used in five basic plowing positions.

Straight Blade

Move both wings to form a straight blade for wide path plowing or "stacking" snow.
OPERATING YOUR SNOWPLOW

Angled Blade

Move one wing "OUT" and the other wing "IN" to form an angled blade in either direction for general plowing and widening.

Retracted (Vee) Blade

Move both wings "IN" toward the vehicle for initial break-through plowing and plowing paths or walkways.
OPERATING YOUR SNOWPLOW

Scoop Blade
Move both wings "OUT" away from the vehicle to form a scoop to "carry" snow with minimum spilloff.

Dogleg Blade
Move one wing to straight blade position and the other "OUT" to scoop blade position for clean up of windrows.
OPERATING YOUR SNOWPLOW

XLS™ BLADE POSITIONS

The XLS snowplow can be used in four basic plowing positions.

Retracted Blade

Move both wings "IN" to form a standard straight blade.

Scoop Blade

Move both wings "OUT" and ahead of the vehicle to form a scoop to "carry" snow with minimum spilloff.

NOTE: Always transport the XLS snowplow with both wings fully retracted.
**OPERATING YOUR SNOWPLOW**

**Dogleg Blade**

Move one wing to extended blade position and the other "OUT" to scoop blade position for clean up of windrows.

**Extended Blade**

Move both wings "OUT" straight for an extra-wide blade for clearing large areas.
SNOWPLOW HEADLAMP CHECK

With all electrical plugs connected, check the operation of vehicle and snowplow headlamps.

<table>
<thead>
<tr>
<th>Lights</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parking Lamps</td>
<td>Both vehicle and snowplow lamps should be ON.</td>
</tr>
<tr>
<td>Right Turn Signal</td>
<td>Both vehicle and snowplow lamps should be ON.</td>
</tr>
<tr>
<td>Left Turn Signal</td>
<td>Both vehicle and snowplow lamps should be ON.</td>
</tr>
</tbody>
</table>

Connecting and disconnecting the electrical plugs should switch between the vehicle and snowplow headlamps as follows:

- Electrical plugs DISCONNECTED – Vehicle headlamps function normally.
- Electrical plugs CONNECTED – Vehicle headlamp functions transfer to the snowplow headlamps. On some DRL systems, both the vehicle and snowplow headlamps will function.

Aiming the Headlamps

- Aim the snowplow headlamps with the snowplow mounted and raised in the transport position. See "Aiming Headlamp Beams" in the Maintenance section for instructions.

- Aim the vehicle headlamps with the snowplow removed from the vehicle.
ANTI-WEAR SHOE ADJUSTMENT

⚠️ WARNING
Blade can drop unexpectedly. Place blade on jack stands. Failure to do so could result in serious personal injury.

⚠️ CAUTION
Do not store unused spacers on top of the shoe holder. This could damage the blade.

Recommended Shoe Adjustments

For gravel surfaces: The bottom surface of the shoe should be 1/4" to 1/2" below the cutting edge.

For hard surfaces (concrete or asphalt): The bottom surface of the shoe should be even with the cutting edge.

Adjustment Procedure

Standard shoe kit shown. Optional shoe kits, available for most models, have a bolt-on shoe holder.
1. Raise the blade one foot off the road surface, turn the control OFF. From in front of the blade, place jack stands under the cutting edge.

2. Turn the control ON and lower the blade onto the jack stands. Turn the control and vehicle ignition OFF.

3. Remove the linchpin and slide the anti-wear shoe down and out of the shoe holder.

4. Remove one or more spacers from the shoe stem and reinstall the shoe into the shoe holder.

5. Reinstall the linchpin.

6. Turn the control and vehicle ignition ON. Raise the blade slightly from the jack stands. Turn the control OFF and remove the jack stands.

7. Stand 8 feet clear of the blade when checking the height adjustment of the cutting edge to the road surface.

8. **DO NOT** store unused spacers on top of the shoe holder.

---

**WARNING**

Blade can drop unexpectedly. Place blade on jack stands. Failure to do so could result in serious personal injury.
OPERATING YOUR SNOWPLOW

HYDRAULIC SYSTEM

The Insta-Act® hydraulic unit's valve manifold includes relief valves to prevent damage to the blade or vehicle if an obstacle is hit at either end of the blade. When force against the blade causes the pressure in an extended ram to exceed set limits, the relief valve opens allowing fluid to escape and the ram retracts.

For hydraulic fluid type and filling instructions, see "Annual Fluid Change" under "Hydraulic System" in the Maintenance section of this manual.
**HS Compact Plow:** Two single-acting hydraulic rams hold the blade at the desired angle. The hydraulic unit’s manifold has built-in blade scrape lock circuitry. This feature resists the tendency of a snowplow to "float up" when large amounts of snow build up in front of the blade while plowing deep snow or stacking snow into piles. The scrape lock feature is factory set. See your sales outlet for adjustment.

**EZ-V®:** Two double-acting hydraulic rams hold the wings at the desired angles.
OPERATING YOUR SNOWPLOW

BLADE DROP SPEED ADJUSTMENT

The quill in the valve manifold adjusts the blade drop speed.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keep 8' clear of the blade when it is being raised, lowered, or angled. Do not stand between vehicle and blade or directly in front of the blade. If the blade hits or drops on you, you could be seriously injured.</td>
</tr>
</tbody>
</table>

NOTE: For HS Compact Plows: The blade will not drop when quill is fully tightened (clockwise). Turn OFF the plow control, turn the quill 1/8 turn outward (counterclockwise), then proceed with blade drop speed adjustment.

HT Series™ Blades

Straight Blades

HS Compact Plow Blades

Lit. No. 72446, Rev. 04 66 March 1, 2020
1. Lower the blade to the ground before making the adjustment.

2. Remove the hydraulic unit cover.

   **XtremeV™, XV2™, and XLS™ hydraulic units:** Raise the top cover retainer, remove the bottom cover retainer, and remove the rear cover.

3. Turn the quill IN (clockwise) to decrease drop speed. Turn the quill OUT (counterclockwise) to increase drop speed.

4. Stand 8 feet clear of the blade when checking adjustment.

5. Replace the hydraulic unit cover.

   **XtremeV™, XV2™, and XLS™ units:** Replace the cover and reinstall the top and bottom cover retainers.

---

**EZ-V® Blades**

**XtremeV & XV2 Blades**

**XLS Blades**
SCRAPE LOCK ADJUSTMENT

NOTE: The HS Compact Plow snowplow's manifold has a built-in blade scrape lock feature that is factory set. See your sales outlet for HS Compact Plow scrape lock adjustment.

HT Series™ Snowplows: Follow the instructions below to increase the pressure setting of the blade's scrape lock feature. The snowplow must be attached to the vehicle and the snowplow battery cable and lighting harness must be connected before beginning this procedure.

1. Park the vehicle on a smooth, level, hard surface, such as concrete. Lower the blade to the ground and turn the control OFF. Turn the vehicle ignition to the "OFF" position.

2. Disconnect the snowplow battery cable from the vehicle battery cable.

3. Remove the hydraulic unit cover.

4. Loosen the breather/fill plug slowly to relieve any pressure in the reservoir.

5. Using a T-fitting, install a 500–600 psi gauge in the lift ram base hose.

Scrape Lock Adjustment

- Increase Pressure
- Decrease Pressure
6. Retighten the breather/fill plug.

7. Reconnect the snowplow battery cable to the vehicle battery cable.

8. Turn the vehicle ignition to the "ON" or "ACCESSORY" position. Turn the control ON.

9. While pressing the RAISE button on the snowplow control, note the hydraulic gauge pressure reading as the blade is rising. (The pressure can only be read as the blade is rising. It may be necessary to perform this process more than once to obtain an accurate reading.) The recommended pressure is 350 psi.

10. If the hydraulic pressure reading is less than 350 psi, increase the pressure by turning the scrape lock valve stem clockwise 1/4 turn and retest pressure.

   **CAUTION**

   Never operate the unit while adjusting the scrape lock valve. Doing so will damage the scrape lock valve O-rings.

   **NOTE: Adjustments should be made in 1/4-turn increments.**

11. Repeat Steps 9 and 10 until the recommended pressure (350 psi) is obtained.

   **NOTE: Adjusting the scrape lock pressure in excess of the recommended pressure will increase amperage draw and will shorten the life of the plow motor.**
12. Once the recommended pressure is obtained, lower the blade completely and turn the control OFF. Turn the vehicle ignition to the "OFF" position.

13. Disconnect the snowplow battery cable from the vehicle battery cable.

14. Loosen the breather/fill plug slowly to relieve any pressure in the reservoir.

15. Remove the hydraulic testing T-fitting and gauge from the lift ram base hose.

16. Reconnect the lift ram base hose and tighten securely.

17. Check the hydraulic fluid level and add if necessary.

18. Retighten the breather/fill plug.

19. Replace the hydraulic unit cover.

**CAUTION**

Do not mix different kinds of hydraulic fluid. Some fluids are not compatible and may cause performance problems and product damage.
ANGLE RAM ADJUSTMENT – EZ-V® BLADES

The EZ-V V-plow has adjustable angle rams with two possible mounting positions at the base end of each ram, nearest the vehicle. This feature provides a means for making an adjustment in available ground clearance for when the snowplow is fully raised and in full angled or retracted (vee) positions.

The angle rams are installed from the factory in the inner holes (Position A). If additional ground clearance is desired, reposition the rams to Position B, being sure to use the same corresponding hole for attaching each ram.

Failure to make the adjustment or failure to use the same corresponding holes for attaching the rams could result in poor performance or damage.
OPERATING YOUR SNOWPLOW

TRANSPORTING SNOWPLOW

⚠️ WARNING
Position blade so it does not block headlamp beams.
Do not change blade position while traveling. You could suddenly lower blade accidentally.

⚠️ CAUTION
Transport speed should not exceed 45 mph (72 km/h). Further reduce speed under adverse travel conditions.

NOTE: Always transport the XLS™ snowplow with both wings fully retracted.

1. Completely raise the blade.
2. Adjust the blade height for maximum snowplow headlamp illumination.
3. Adjust the blade to the straight position.
4. Turn the control OFF to lock the blade in place.

NOTE: Overheating is unlikely under normal driving conditions, but occasionally the snowplow may be positioned where it deflects air away from the radiator. If this occurs, stop the vehicle and raise, lower, or angle the snowplow slightly to correct overheating.

NOTE: Only the driver should be in the vehicle cab when the snowplow is attached.

NOTE: For V-plows, use care when driving or entering driveways with the snowplow in the retracted (zee) position. The outer ends of the cutting edges could contact the ground.
OPERATING YOUR SNOWPLOW

DRIVING AND PLOWING ON SNOW AND ICE

**WARNING**

Drinking and then driving or plowing is very dangerous. Your reflexes, perceptions, attentiveness, and judgment can be affected by even a small amount of alcohol. You can have a serious or even fatal collision if you drive after drinking. Please do not drink and then drive or plow.

Refer to your vehicle owner's manual instructions for driving in snow and ice conditions. Remember, when you drive on snow or ice, your tires will not get good traction. You cannot accelerate as quickly, turning is more difficult, and you will need longer braking distance.

Wet and hard-packed snow or ice offers the worst tire traction. It is very easy to lose control. You will have difficulty accelerating. If you do get moving, you may have poor steering and difficult braking, which can cause you to slide out of control.

Here are some tips for driving in these conditions:

- Drive defensively.
- Do not drink, then drive or plow snow.
- Plow or drive only when you have good visibility for operating a vehicle.
- If you cannot see well due to snow or icy conditions, you will need to slow down and keep more space between you and other vehicles.
- Slow down, especially on higher-speed roads. Your headlamps can light up only so much road ahead.
- If you are tired, pull off in a safe place and rest.
- Keep your windshield and all glass on your vehicle clean to see around you.
- Dress properly for the weather. Wear layers of clothing. As you get warm you can take off layers.
PLOWING SNOW

⚠️ WARNING
Never plow snow with head out the vehicle window. Sudden stops or protruding objects could cause personal injury.

⚠️ CAUTION
Wear a seat belt when plowing snow. Hidden obstructions could cause the vehicle to stop suddenly, resulting in personal injury.

⚠️ CAUTION
Flag any obstructions that are hard to locate under snow to prevent damage to product or property.

⚠️ CAUTION
Never stack snow with the blade angled. This could damage the snowplow or the vehicle bumper.

⚠️ CAUTION
Plowing speed should not exceed 10 mph (16 km/h).

NOTE: Only the driver should be in the vehicle cab when the snowplow is attached.
OPERATING YOUR SNOWPLOW

General Instructions

1. Before plowing, make sure that you know of any obstructions hidden beneath the snow, such as bumper stops in parking lots, curbs, sidewalk edges, shrubs, fences, or pipes sticking up from the ground. If unfamiliar with the area to be plowed, have someone familiar with the area point out obstacles.

2. If possible and you have good visibility, plow during the storm rather than letting snow accumulate.

3. Do not exceed 10 mph (16 km/h) when plowing snow.

4. When you are stacking snow, begin raising the blade as you come close to the stack. This will let the blade ride up the stack.

Hard-Packed Snow

1. On blades equipped with shoes, raise the anti-wear shoes so that the cutting edge comes into direct contact with the pavement. DO NOT stack spare shoe spacers on top of the shoe holder.

2. Use the lowest gear to place maximum power behind the cutting edge.

3. An angled blade is more effective for removing hard-packed snow.

Deep Snow

1. For straight blades, shear off top layers by plowing with the blade raised 3 to 4 inches for the initial pass. For V-plows, move the blade into the fully retracted (vee) position and make an initial pass.
2. Bite into the edges using only a partial blade width until the job is cut down to size for full blade plowing.

   Rule of thumb:
   - 6" of snow — plow with entire blade width;
   - 9" of snow — plow with 3/4 blade width;
   - 12" of snow — plow with 1/2 of the blade.

   For XLS™ blades in scoop position, plow all depths with entire blade width.

   Experience and 'feel' are the best guides.

3. When plowing deep snow, be sure to keep vehicle moving.

4. Ballast is suggested for maximum traction. Secure ballast behind the rear axle. Do not exceed vehicle's GVWR and GAWR.

5. For increased traction use tire chains, where legal.

**Clearing Driveways**

1. Head into the driveway with the blade angled and plow the snow away from any buildings. Widen the driveway by rolling snow away from any buildings.

2. If a building is at the end of the driveway, plow to within a vehicle length of the building. Push as much snow as possible off the driveway.

3. With a raised blade, drive through the remaining snow to the building. Drop the blade and back drag the snow away from the building at least one vehicle length. Repeat if necessary.

4. Back the vehicle up to the building and plow forward, removing the remaining snow from the driveway. Check municipal ordinances for proper disposal of snow.
OPERATING YOUR SNOWPLOW

Clearing Parking Lots

1. Clear areas in front of buildings first. With the blade raised, drive up to the building. Drop the blade and back drag the snow away from the building. When snow is clear of the buildings, turn the vehicle around and push snow away from the buildings toward the outer edges of the lot.

2. Plow a single path down the center in the lengthwise direction.

3. With the blade in the scoop, angle, or dogleg position, plow successive strips lengthwise until the area is cleared and snow is "stacked" around the outer edges.

4. If snow is too deep to clear in the above manner, clear main traffic lanes as much as possible.

PARKING WITH SNOWPLOW ATTACHED

**WARNING**

Lower the blade when the vehicle is parked. Keep 8' clear of the blade. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

Whenever you park your vehicle, completely lower the blade to the ground.

**TOWING DISABLED OR STUCK VEHICLE**

Do not use any snowplow components as an attachment point when retrieving, towing, or winching a disabled or stuck vehicle.
DETACHING SNOWPLOW FROM VEHICLE & STORAGE

DETACHING SNOWPLOW

⚠️ WARNING
Keep 8' clear of the blade when it is being raised, lowered, or angled. Do not stand between vehicle and blade or directly in front of the blade. If the blade hits or drops on you, you could be seriously injured.

⚠️ WARNING
Inspect snowplow components and fasteners for wear or damage whenever attaching or detaching the snowplow. Worn or damaged components could allow the snowplow to drop unexpectedly.

⚠️ CAUTION
Never pull jack lock when blade assembly is not attached to vehicle. The headgear assembly will suddenly drop.

NOTE: The blade must be in the straight position when attaching or detaching the snowplow.

During the off-season, the control can be removed. Disconnect the connector in the cab and store the control in the glove box of the vehicle.

Detaching Steps:

1. Park the vehicle on a smooth, level, hard surface, such as concrete.

   **HS Compact Plow Blades:** Activate FLOAT mode, then turn the plow control OFF. Apply the vehicle parking brake. Unplug the electrical harness.

   **Other Blades:** Lower the blade to the ground.

2. Pull the stand lock pin outward and let the stand drop to the ground.

   **HS Compact Plow Blades:** Release the stand lock pin. Verify that the stand is locked by trying to lift the stand.
3. **HT Series™ Blades:** Pull and hold jack lock out. Lower jack until it contacts the ground. Release jack lock. Verify that jack is locked by trying to lift jack. Repeat on opposite side. *For illustration, see page 80.*

**HS Compact Plows:** Pull both connecting pins outward and rotate to lock them into their receiver notches. *For illustration, see page 80.*

**Other Blades:** Pull pin release handle away from stop and jack lock. Release jack lock. Verify that jack is locked by trying to lift jack.
DETACHING SNOWPLOW FROM VEHICLE & STORAGE

NOTE: Place electrical plugs in storage position. The driver-side and center plug on 3-plug electrical systems are joined for storage. The passenger-side and 2-plug systems are equipped with plug covers.

Detach HT Series™ Blade

- Headlamp Bracket
- Pin Release Handle
- Attachment Arm
- Pushplate
- Connecting Pin
- Jack (lowered)
- Jack Lock
- Jack Lock Pin Release Handle (raised)

Lit. No. 72446, Rev. 04

DETACHING SNOWPLOW FROM VEHICLE & STORAGE

Detach HS Compact Plow

- Blade
- Locking Hole
- Headgear Slot
- Connecting Pin Hole
- Stand
- Connecting Slot
- Receiver
- Connecting Pin
- Rear Receiver Pin
- Stand Handle
- Stand
- Stand Lock Pin
- Receiver Notch
- Connecting Pin
4. **HS Compact Plows**: Back the vehicle away from the snowplow. Place the electrical plugs in the storage boot on the snowplow. The receivers can be detached from the vehicle, if desired, by removing the two 1/2" x 4" pins that attach the receivers to the mounts. 

*Stop here; blade is detached.*

**Other Blades**: Stand in front of blade. While pushing headgear toward vehicle with left hand, push pin release handle down to disengage connecting pins. Make sure that the connecting pins are fully retracted. If unable to push headgear from in front of blade, stand in front of headgear on the driver's side and push headlamp bracket.

---

**CAUTION**

On 2-plug electrical systems, plug covers shall be used whenever snowplow is disconnected. Vehicle battery cable is 12V unfused source.

5. Detach all electrical connectors.

**NOTE**: After each use of the snowplow, reapply dielectric grease to the electrical plugs to maintain the protective coating on the terminals.
STORAGE

Your snowplow is designed to be moved into a storage location using your vehicle and plow attaching system. For easier attaching of the snowplow, store it on a hard, level surface.
MAINTENANCE VIDEOS

Video demonstrations of several snowplow maintenance tasks, including "Preseason Plow Maintenance" and "Annual Fluid Change," are available under the Support heading at www.fisherplows.com.

PRESEASON CHECK

⚠️ WARNING

Lower the blade when the vehicle is parked. Keep 8' clear of the blade. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

Before the snow season, check your equipment to make sure that it's in working condition. Here are some tips for getting your equipment ready:

- Clean and tighten all electrical connections and coat with dielectric grease to prevent corrosion.
- Check hydraulic system for leaks and cracked or damaged hoses.
- Drain hydraulic system and refill with recommended hydraulic fluid. For hydraulic fluid type and filling instructions, see "Annual Fluid Change" under "Hydraulic System" in this section of the manual.
- Replace worn or damaged parts.
- Check all mounting points and tighten fasteners, on both snowplow and vehicle. Verify that all cotter pins are in place.
- Repaint blade assembly and attachments, as necessary, to protect the metal.
MAINTENANCE

• Install auxiliary and flashing lights for compliance and visibility in accordance with local regulations.

• Check headlamps, auxiliary lights, heater, and windshield wipers for proper operation.

• Inspect and test your battery. Recharge or replace as necessary.

• Ballast may be necessary, or beneficial, on some vehicles to provide maximum traction, braking, and handling.

• Any ballast material (such as sand and blocks) must be solidly secured to the vehicle preventing it from moving under harsh plowing conditions.

POSTSEASON MAINTENANCE

CAUTION
Servicing the trip springs without special tools and knowledge could result in personal injury. See your authorized FISHER® outlet for service.

NOTE: Coat all electrical connections with dielectric grease.

• Clean and paint blade and attachments as needed.

• Be sure lift ram is fully collapsed so the rod is not exposed.

• Apply general purpose petroleum grease to exposed chrome surfaces of the rams to prevent rust.

• Lubricate all pivot points (e.g., connecting pin assembly and lower spring anchor) with general purpose petroleum grease.
AIMING HEADLAMP BEAMS

Tighten headlamp fasteners to 22 ft-lb, or 30 N·m, once correct visual aim is achieved.

Place vehicle on a level surface 25 feet in front of a matte-white screen, such as a garage door. The screen should be perpendicular both to the ground and to the vehicle centerline.

The vehicle should be equipped for normal operation. The snowplow blade should be in place and in raised position.

See that there is no load in the vehicle other than the driver and ballast as specified in the eMatch selection system.

The following steps are those listed as pertinent to headlamp aiming by the Society of Automotive Engineers (SAE) in specification #SAE J599d.

1. Prepare vehicle for headlamp aim or inspection. Before checking beam aim, the inspector will:
   a. Remove ice or mud from under fenders.
   b. Set tire inflation pressures to the values specified on vehicle information label.
   c. Check springs for sag or broken leaves.
   d. Check functioning of any automatic vehicle leveling systems and specific manufacturer's instructions pertaining to vehicle preparation for headlamp aiming.
   e. Clean lenses.
   f. Check for bulb burnout and proper beam switching.
   g. Stabilize suspension by rocking vehicle sideways.
2. Mark (or tape) the vertical centerline of the snowplow headlamps and the vertical centerline of the vehicle on the screen. Mark the horizontal centerline of the snowplow headlamps on the screen (distance from ground to snowplow headlamp centers).

3. Align the top edge of the high-intensity zone of the snowplow lower beam below the horizontal centerline and the left edge of the high-intensity zone on the vertical centerline for each snowplow headlamp. (Refer to the diagram below.)
MAINTENANCE

CHANGING BLADE-EDGE ILLUMINATION MODE

On snowplows equipped with INTENSIFIRE™ LED headlamps, the EdgeView™ technology feature offers three modes for blade-edge illumination. The factory default setting is ON.

To change the blade-edge illumination mode, remove the cover from the fuse holder located near the "Y" port of the headlamp control module installed in the vehicle engine compartment.

Remove the jumper fuse from the fuse holder and re-insert it in the desired mode position as shown below. Replace the fuse holder cover.

- **Default – ON:** Blade edge lights illuminate when plow has power.
- **FLT:** Blade edge lights illuminate when blade is in FLOAT mode.
- **OFF:** Blade edge lights disabled.

![Fuse Holder and Cover Diagram](image_url)
MAINTENANCE AND ADJUSTMENT

⚠️ WARNING
Lower the blade when the vehicle is parked. Keep 8' clear of the blade. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

Your FISHER® snowplow is designed for rugged, dependable service. However, like the vehicle on which it is mounted, it needs regular care and maintenance.

Check the following before and frequently during the plowing season:

1. Make sure that all fasteners, mounting bolts, and hydraulic connections are tight.

2. Make sure that all electrical connections including grounds are clean, tight, free of rust or corrosion, and are coated with dielectric grease.

3. Check all plugs and seals for hydraulic fluid leaks. Repair as necessary.

4. Lubricate all moving parts, especially the connecting pin extractors, as shown below. Not doing so will make operation of the mount difficult and possibly damage components.
HDX™ ADJUSTABLE ATTACK ANGLE

**CAUTION**
If the snowplow is not attached to the vehicle, lean the headgear forward. Failure to do so could result in the headgear shifting unexpectedly and causing personal injury.

The HDX blade can be adjusted to three attack angles: 55°, 65°, and 75°.

The snowplow does not need to be attached to the vehicle to perform this adjustment.

Blade Adjustment

1. To adjust the attack angle, loosen (DO NOT REMOVE) the lower quadrant 1" locknuts. Remove the upper quadrant 3/4" locknuts, washers, and cap screws.

![Diagram showing the process of adjusting the attack angle.](image-url)
2. Align the desired attack angle holes in the quadrant and blade as shown.

3. Reinstall the upper quadrant fasteners on both sides of the quadrant as shown.
4. Torque upper and lower fasteners as shown:

- Torque 3/4" fasteners to 269 ft-lb.
- Torque 1" fasteners to 764 ft-lb.

**NOTE:** The lower 1" locknuts must be torqued to 764 ft-lb and the upper 3/4" locknuts must be torqued to 269 ft-lb.

5. If the attack angle has been changed to or from 55°, the lower mounting position of the springs must be changed as shown.

**CAUTION**

Servicing the trip springs without special tools and knowledge could result in personal injury. See your authorized outlet for service.

- 55°
- 65° & 75°
6. A special spring removal tool (PN 20043-1) must be used to safely make this adjustment. **NEVER ATTEMPT SPRING REMOVAL WITHOUT THE SPECIAL TOOL.** Follow the instructions in the spring tool kit for proper tool usage.

**NOTE:** If the springs are not adjusted to match the attack angle setting, blade damage may occur.

### Accessories Adjustment

The blade guides must be adjusted to match the attack angle. Remove the bottom nut and washer, and reposition blade guides as shown.

Other accessories, such as cutting and back drag edges, blade wings, and shoes must also be adjusted. Follow the instructions included with your particular kit to adjust these items.
LEVELING THE HDX™ OR HD2™ A-FRAME

After adjusting the attack angle, it might be necessary to level the A-frame. Measure the distance from the center of the connecting pin hole to the ground.

Find the appropriate range for your attack angle setting, and verify that the headgear is connected to the corresponding A-frame hole.

GREASING HDX PIVOT BEAM

1. Using a rubber-tipped seal-off coupler, apply good quality multipurpose grease through the two grease points in the rear of the pivot beam.

2. Grease the pivot beam at the beginning of the snowplow season. Reapply as needed during the season and before putting the snowplow in storage.

If your truck's mount height falls outside of the ranges shown, the specified attack angle cannot be achieved with your vehicle.

Once the snowplow has been installed on the vehicle in the correct configuration, a fine adjustment can be made to bring the blade cutting edges into full contact with the ground. Make further adjustments as the cutting edges wear in order to ensure good scraping action.

1. The snowplow must be installed in the correct configuration on a properly ballasted vehicle. Vehicle and snowplow must be parked on a level surface.

2. Place the blade wings in the scoop position on the ground with no tension on the lift chain.

3. Remove the rear push assembly to T-frame fasteners. Loosen the front fasteners and allow the blade to find a level position.

4. Select the hole in the rear of the T-frame that is best aligned with the rear hole in the push assembly and reinstall the rear fasteners. Tighten all four fasteners to 250 ft-lb.

Choose hole that aligns with hole in push assembly.
5. Raise and lower the blade several times. The cutting edge should contact the level surface across the full length of the cutting edge.

6. Verify that the cutting edges remain in full contact with the ground while the wings are shifted from the scoop position to a retracted (vee) position.

Complete this procedure as often as required to provide even cutting edge wear. Replace the cutting edge(s) on your XtremeV™ or XV2™ blade when worn to within 1" of the carriage bolts.

**GREASING PIVOT PIN HINGE**

For XV2 and EZ-V® Snowplows: Using a rubber-tipped seal-off coupler, apply a good quality multipurpose grease at the five grease points along the center pivot pin hinge.

Grease the hinge at the beginning of the snowplow season. Reapply as needed during the season and before putting the snowplow in storage.
HYDRAULIC SYSTEM

Fluid Level

CAUTION
Do not mix different kinds of hydraulic fluid. Some fluids are not compatible and may cause performance problems and product damage.

NOTE: On XtremeV™, XV2™, XLS™, and EZ-V® blades, add fluid only when all rams are retracted.

NOTE: Remove fill plug slowly to relieve any pressure in reservoir.

1. Park the vehicle on a hard, level surface. With the Minute Mount® 2 system attached to the vehicle, activate the control.

2. For straight blades, any angle will do, but for XtremeV, XV2, EZ-V, and XLS blades, move the blade wings to the fully retracted (vee) position.

3. Activate the control FLOAT function and manually collapse the lift ram all the way.

4. Turn the control OFF.

5. Remove the fill plug.
6. **HT Series™ Blades**: Fill the reservoir to within 2-1/2" from the top of the fill hole and replace the fill plug.

**HS Compact Plows**: Check the fluid level in the reservoir. The fluid level should be 1-1/2" to 2" below the top of the reservoir. Add the recommended hydraulic fluid, if necessary. Do not overfill.

**XtremeV™, EZ-V®, XV2™, XLS™, and other Straight Blades**: Fill the reservoir to the top of the fill hole and replace the fill plug.

For fluid recommendations see "Annual Fluid Change" in this section.
MAINTENANCE

Annual Fluid Change

⚠️ CAUTION
Change the fluid at the beginning of each plowing season. Failure to do this could result in condensation buildup during the non-plowing season.

⚠️ CAUTION
Do not mix different kinds of hydraulic fluid. Some fluids are not compatible and may cause performance problems and product damage.

Perform this operation with the snowplow attached to the truck on a hard level surface. Disable the one-touch FLOAT feature, if enabled. (See "One-Touch FLOAT" in the Operating Your Snowplow section of this manual.)

1. Place jack stands under the A-frame/T-frame so that the blade will be suspended a few inches off the ground when lowered.

2. Lower the blade until its weight is supported by the jack stands.

3. Activate the control FLOAT function and manually collapse the lift ram all the way. (Not required for HT Series™ blades.) Turn the control OFF.

NOTE: Loosen the fill plug slowly to relieve any pressure in the reservoir.

4. Remove the drain plug in the bottom of the hydraulic reservoir for straight blades, or the drain cap located on the fitting side of the hydraulic unit for XtremeV™, XV2™, EZ-V®, and XLS™ blades. (See illustrations on previous pages.)

5. Completely drain the reservoir and replace the drain plug/cap.
6. Carefully note hose routings and the positions of any protective hose wraps for proper reassembly.

7. Remove the angle ram hoses from the fittings on the hydraulic unit and place in a drain pan or suitable container. (See the following illustrations and the "Hose or Fitting Replacement" instructions later in this section.)

8. Manually angle the blade fully in each direction to remove fluid from the angle rams. Do not allow the hose(s) from the extending ram or the opposite side of the ram (XtremeV™, EZ-V®, and XV2™ blades only) to take fluid back in.

9. Reconnect the angle ram hoses to the proper fittings. Reinstall all protective hose wraps in their original positions. (See the following illustrations and the "Hose or Fitting Replacement" instructions later in this section.)

**WARNING**
Keep 8' clear of the blade when it is being raised, lowered, or angled. Do not stand between vehicle and blade or directly in front of the blade. If the blade hits or drops on you, you could be seriously injured.

AeroShell® is a registered trademark (®) of Shell Oil Company.
11. Remove air from the system. Follow the steps under the heading for the correct blade model:

**Air Removal – HT Series™ and Straight Blades**

| a. Turn the control ON and completely angle the blade to the left and right several times. Turn the control OFF. |
| b. Fill the reservoir to the top of the fill hole and replace the fill plug. |

**CAUTION**
Do not raise blade during fill process as this may cause pump cavitation.

10. For straight blades, any angle will do, but XtremeV™, XV2™, EZ-V®, and XLS™ blades must be in the fully retracted (vee) position. With the lift ram fully retracted, fill the reservoir with FISHER® EZ Flow hydraulic fluid rated to –40°F (–40°C), or other fluid conforming to Military Specification MIL-H-5606 A, such as Mobil Aero HFA or Shell AeroShell® Fluid 4. Replace the fill plug.

**NOTE:** On XtremeV, XV2, EZ-V, and XLS blades, add fluid only when all rams are retracted.

**WARNING**
To prevent accidental movement of the blade, always turn the control OFF whenever the snowplow is not in use. The power indicator light will turn OFF.
NOTE: Loosen fill plug slowly to relieve any pressure in the reservoir.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>To prevent accidental movement of the blade, always turn the control OFF whenever the snowplow is not in use. The power indicator light will turn OFF.</td>
</tr>
</tbody>
</table>

c. Turn the control ON and raise and lower the snowplow several times. Activate the control FLOAT function and manually collapse the lift ram all the way (not required for HT Series blades) after each lowering of the blade. Turn the control OFF.

d. Add more fluid as needed.

**HT Series™ Blades:** Fill the reservoir to within 2-1/2" from the top of the fill hole and replace the fill plug.

**All other Straight Blades:** Fill the reservoir to the top of the fill hole and replace the fill plug.
Air Removal – XtremeV™, XV2™, and EZ-V® Blades

**WARNING**

To prevent accidental movement of the blade, always turn the control OFF whenever the snowplow is not in use. The power indicator light will turn OFF.

a. Turn the control ON and completely extend and retract the driver-side wing several times. With all rams fully retracted, turn the control OFF.

b. Fill the reservoir to the top of the fill hole and replace the fill plug.

c. Repeat Steps a and b for the passenger-side wing.

d. Turn the control ON and raise and lower the snowplow several times. Activate the control FLOAT function and manually collapse the lift ram all the way after each lowering of the blade. With all rams fully retracted, turn the control OFF.

e. Fill the reservoir to the top of the fill hole and replace the fill plug.

**NOTE:** Loosen fill plug slowly to relieve any pressure in the reservoir.
Air Removal – XLS™ Blades

a. Turn the control ON and completely extend and retract the driver-side wing several times. Repeat for the passenger-side wing. With the wing and lift rams fully retracted, turn the control OFF.

b. Fill the reservoir to the top of the fill hole and replace the fill plug.

NOTE: Loosen fill plug slowly to relieve any pressure in the reservoir.

c. Turn the control ON. Angle the blade fully left and right and raise and lower the snowplow several times. Activate the control FLOAT function and manually collapse the lift ram all the way after each lowering of the blade. With all rams fully retracted, turn the control OFF.

d. Fill the reservoir to the top of the fill hole and replace the fill plug.

**WARNING**

To prevent accidental movement of the blade, always turn the control OFF whenever the snowplow is not in use. The power indicator light will turn OFF.
Hose or Fitting Replacement

**WARNING**
Lower the blade when the vehicle is parked. Keep 8' clear of the blade. Temperature changes could change hydraulic pressure, causing the blade to drop unexpectedly or damaging hydraulic components. Failure to do this could result in serious personal injury.

**DO NOT** use thread sealant/tape on hoses or fittings. This could damage the product. Follow recommended replacement procedures for fittings and hoses.

1. Lower the snowplow completely and turn the control OFF.

**NOTE:** Loosen fill plug slowly to relieve any pressure in the reservoir.

2. Carefully note hose routings and the positions of any protective hose wraps for proper reassembly.

3. Loosen hoses or fittings slowly to relieve any residual pressure.

4. To remove a hose, loosen and unscrew the hose flare nut from the fitting.

5. To remove a fitting, loosen the jam nut and unscrew the fitting from the port.
MAINTENANCE

Installing Hydraulic Fittings and Hoses

NOTE: Overtightening JIC hose fitting ends will result in a fractured fitting.

DO NOT use any type of sealant or tape on the fittings or hoses. This could damage product. Always use two wrenches to ensure proper tightening of fittings and hoses.

Installing SAE O-Ring Fittings in Valve Block and Rams

1. Turn the jam nut on the fitting as far back as possible.

2. Lubricate the O-ring with clean hydraulic fluid.

3. Screw the fitting into the port by hand until the washer contacts the port face and shoulder of the jam nut threads.

4. Unscrew the fitting to the proper position no more than one full turn.

5. Using two wrenches, hold the fitting body in position and tighten the jam nut until the washer again contacts the port face, then tighten an additional 1/8 to 1/4 turn to lock the fitting in place. Final torque on the jam nut should be approximately 20 ft-lb.

Installing Hydraulic Hoses

1. Screw the flare nut onto the fitting flare and hand tighten.

2. Align the hose so there are no twists or sharp bends and so it will not be pinched or pulled by moving parts.

3. Using a pair of adjustable pliers, hold the hose in position and use a wrench to tighten the flare nut 1/8–1/4 turn beyond hand tight. Final torque on the flare nut should be approximately 20 ft-lb.

4. Reinstall any protective hose wraps in their original positions.
MAINTENANCE

FUSE REPLACEMENT

The vehicle electrical system contains several automotive-style fuses. The snowplow park/turn lights and control power is covered by fuses in the under-hood snowplow wiring. The control fuse is "hot" when the vehicle ignition switch is ON and the electrical connections to the snowplow are completed.

The XtremeV™ and XV2™ hydraulic unit harness system contains four automotive-style fuses. The 3-solenoid harness (to port B on the hydraulic unit module) and 8-solenoid harness (to port C) each contain two 4A fuses.

The XLS™ hydraulic unit harness system contains four automotive-style fuses. The 2-solenoid harness (to port B on the hydraulic unit module) and 6-solenoid harness (to port C) each contain two 4A fuses.

The EZ-V® hydraulic unit harness system contains one 5A fuse in the 3-coil port C harness, and two 5A fuses in the 4-coil port B harness.

The straight blade and HT Series™ hydraulic unit harness systems each contain two 4A automotive-style fuses in the 3-solenoid harness (to port B on the hydraulic unit module).

The HS compact plow vehicle control harness contains one 2A automotive-style fuse and the hydraulic unit contains two 4A automotive-style fuses.

Your system may also include a 200A fuse between the battery and vehicle battery cable.

If a problem should occur and fuse replacement is necessary, the replacement fuse must be of the same type and amperage rating as the original. Installing a fuse with a higher rating can damage the system and could start a fire.
SNOWPLOW VEHICLE BATTERY
BEST PRACTICES

• Keep all battery connections tight and clean. Poor connections cause higher power consumption.

• Before the snow season, confirm that the battery is fully charged: 12.7V to 12.8V with the engine OFF. Beginning the plowing season with a weak battery results in deep-cycle depletion of the battery charge.

• If the battery charge level is low or questionable, hook up a battery charger when the vehicle is not in use. If the battery cannot achieve or maintain a full charge, replace it. (On dual-battery vehicles, always replace both batteries even if only one of them is bad.)

• Avoid leaving the snowplow vehicle parked (unused) for three weeks or longer.

• Parking a vehicle with the battery in a discharged state can result in permanent battery damage.

• Avoid operating the snowplow without the vehicle engine running.
MAINTENANCE

VEHICLE
The snowplow operating vehicle shall be maintained according to manufacturer's recommendations. Tire pressure shall be maintained according to manufacturer's recommendation.

RECYCLE
When your snowplow has performed its useful life, the majority of its components can be recycled as steel or aluminum. Hydraulic fluid shall be disposed of according to local regulations. The balance of the parts made of plastic shall be disposed of in a customary manner.

EMERGENCY PARTS/TOOLS
• 10" adjustable wrenches (2)
• Medium flat blade screwdriver
• Common pliers
• #20 & #30 TORX® drivers
• Automotive-style fuses (See previous page for correct fuse ratings for your snowplow.)
• Funnel
• 12V DC test light
• Flashlight
• 1/8" & 3/16" Allen wrenches
• 11/16" and 3/4" open-end wrenches
• 1/4" ratchet, 6" extension, 1/4" & 5/16" sockets
• Electrical tape
• Small pencil magnet
• 1 quart FISHER® EZ Flow hydraulic fluid

TORX® is a registered (®) trademark of Textron, Inc.
MAINTENANCE

TROUBLESHOOTING

If you have followed all of the guidelines in the Maintenance section of this manual and cannot resolve issues with the operation of your FISHER® snowplow, contact one of our authorized outlets for repair information, or visit us online at www.fisherplows.com. Our website has a complete listing of authorized outlets in your area as well as a complete library of Parts Lists, Mechanic's Guides, and service information to assist the qualified mechanic with repair.

Fisher Engineering does not recommend repairs by other than our factory-trained outlets. Failure to use an authorized outlet could affect the warranty coverage on your snowplow.
